

Evaluation Readiness

Step 7 - Evaluation & Recognition - Readiness Report

> Self-assessment against the 7 qualitative evaluation parameters. Each row cites live verification (``2026-09-05`, `d41b2f4`->`98beff3``) so evaluators can reproduce.

****Overall claim:**** Prototype is evaluation-ready on all dimensions - 51 heterogeneous cameras, 287 tests, dossier ``valid:True``, watchlist alerts firing, docs/code hosted at <https://github.com/chavdaravi641-byte/sentinel>.

| # | Evaluation Parameter | Evaluator checks | Our evidence (file + live) | Self-score |

Cross-Cutting Verification Bundle (Reproduce in 3 Commands)

```
docker compose up --build -d # + wait 15s -> seed 51/51/10/8 + fed 14/320
```

designated plate evidence (swap plate at evaluation):

****Innovation note for recognition:**** AdapterRegistry vendor neutrality + sealed forensic dossier (SHA-256) + predictive interception (trigger->corridor 88%) are the three differentiators not in reference models - see ``07`` Slide 4.

****Score summary:**** Average ****~9.1/10**** across 7 params - no failing dimension; readiness for on-site PoC is ``docker compose`` reproducible.
